

Initial Consultation \$70

New to MediSkin? Your initial appointment includes a detailed consultation to understand your specific needs. We'll evaluate your skin concerns and develop a customized treatment plan. Before booking any treatment, we'll discuss options, benefits, costs, and commitments. Consent forms and possibly photos will be needed. Please bring your skincare and makeup for assessment.

Mini Treatments starting at \$80

Our mini treatments, known as 'lunchtime procedures,' last approximately 45 minutes. Whether you need exfoliation, extractions for blemishes like Milia and Comedones, a nourishing Vitamin boost, or a brightening refresher, our mini treatments cater to your needs. Tailored for congested, acne-prone skin, Milia removal, problematic skin types (dry, dull, oily, tired, and sensitive), and refreshing your skin after a long journey, busy day, or before a special event.

Microdermabrasion face & neck \$140

Experience the rejuvenating effects of our non-surgical resurfacing treatment. Using sterile Diamond heads, it gently exfoliates the skin, revealing a fresh, radiant complexion by targeting scars, lines, pore size, pigmentation, and imperfections. Ideal for transitioning seasons or deep cleansing, it delivers exceptional results without surgery, unveiling smoother and more luminous skin.

Prices are subject to change without prior notice.

Enzyme & Chemical Peels starting at \$80

Chemical peels are skin treatments using acids or enzymes to exfoliate and rejuvenate the skin. Enzyme peels: Use natural enzymes from fruits to gently exfoliate the skin, suitable for sensitive skin types, improve skin texture, and brighten the complexion.

Chemical peels: Use acids to exfoliate the skin, available in varying strengths, treat various skin concerns like fine lines, acne, and hyperpigmentation, may require downtime depending on the depth of the peel.

Epi-blading \$140

Also called epidermal levelling or Dermplaning, is a skincare treatment that exfoliates the skin and removes fine facial hair for smoother, brighter skin. It doesn't stimulate more hair growth.

Electrolysis from \$40 - 15min

Electrolysis is an electrical treatment for permanent hair removal on the face or body. It's the sole solution for removing light/grey/white hairs that don't respond to Laser/IPL.

Diathermy from \$70

Diathermy, also known as electro-surgery, uses high-frequency electric currents to generate heat within tissues, which can cut, coagulate, or remove tissue. It's used for various medical purposes, including removing raised skin lesions like moles, papilloma, skin tags, warts, and other benign growths, as well as addressing small capillaries,

spider veins, and angiomas. This versatile technique is commonly employed in dermatology, surgery, and other medical specialties due to its precision and effectiveness.

RF Micro-Needling:

This combines Radio Frequency (RF) and Microneedling techniques. RF employs low-energy radiation to generate heat in the deeper layers of the skin, stimulating collagen and elastin production.

e-Dermastamp®

CIT- Collagen Induction Therapy for tissue stimulation and skin rejuvenation. This German engineered medical device is clinically proven to repair and stimulate collagen, therefore helps to reduce the appearance of scarring, lines, wrinkles, pigmentation, pore size and more.

Plasma Fibroblast

This treatment offers non-surgical, less invasive skin lifting and tightening for immediate and long-term rejuvenation of the face and body. It targets lines, wrinkles, loose skin, scars, stretch marks, and more.

PlasM-soft Fractional Infusion from \$200

This lunch time procedure will tighten and stimulate collagen and elastin while essential nutrients (Vitamins & Minerals) are infused deeper into the skin, leaving it fresh, plump, and rejuvenated for days!
