

Laser Genesis

This treatment utilizes non-invasive laser technology naturally and effectively treats conditions that are typically associated with ageing and sun damage.

Laser Genesis is used to plump up your skin, soften fine lines and wrinkles, decrease or eliminate redness as well as normalising pore size and correcting sun damage and scarring.

What areas can be treated?

The most treated areas are face, neck and décolletage, but Laser Genesis can be used safely to diminish scars (stretchmarks) on other parts of the body.

How does it work?

Laser Genesis works by gently warming the upper compartments of the Dermis, underneath the surface of your skin, stimulating the healing processes and therefore the growth of new collagen.

The result is a healthy looking and vibrant appearance.

The unique wavelength of the Laser will target the vascular network and create heat in the capillaries to reduce redness and telangiectasia.

What are “Diffuse Redness” and “Teleangiectasia”?

Diffuse redness (Couperosis) is a term used for the general appearance of facial redness, such as rosy cheeks (also nose & chin). Couperosis is caused by the dilation of capillaries (vessels) and commonly associated with an inflammatory skin condition called Rosacea.

Unlike Teleangiectasia (facial vessels), which are well defined tiny blood vessels that commonly appear around the nose, cheeks, chin and neckline.

Capillaries can also occur on other parts of the body, such as upper arms, back and legs. Prolonged sun exposure, trauma, ageing, allergies and other factors such as heredity can cause capillaries to dilate and become visible.

Laser Genesis will help your appearance by gently reducing and to diminishing these conditions.

Cutera® Laser Genesis skin therapy

Does it hurt?

NO! Most people describe the sensation during the treatment as “warm sunlight rays” or “relaxing and therapeutic”.

You will experience a gentle warming of your skin and can immediately return to most activities as long as you use an SPF of 15 or higher whenever outdoors.

What are possible side effects?

Although most patients report few to no side effects or down time, the most common one is slight redness (erythema). Please speak to your Dermal Clinician about possible benefits and risks of the treatment.

How many treatments will I need?

You can expect to see gradual improvements with each treatment but on average a course of four to six treatments is recommended to achieve optimal results. Each patient’s necessities and conditions vary and depend on each individual’s unique reactions, healing abilities and lifestyle. Please speak to your Dermal Clinician about your expected results and number of treatments necessary.
