

The Cutera Cool Glide difference

The Cutera Laser combines the ideal laser wavelength with the most flexible parameters to deliver a superior vascular laser system. It treats a broad range of vessels from **tiny spider veins to deep blue reticular veins** quickly, safely, and effectively. Patients with dark, light or tanned skin can experience outstanding results with minimal bruising or blistering.

How does Cutera CoolGlide Vein Therapy work?

The Cutera CoolGlide system delivers pulses of light energy which cause the blood within the vein to coagulate, eventually destroying the vessel which is later reabsorbed by your body. Blood flow will then be redirected to veins deeper below your skin's surface, where it should be.

Who can be treated with the Cutera CoolGlide?

The Cutera Laser features a unique design and long wavelength which allows treatment of patients of **all skin tones**. Your clinician will advise you if Cutera Laser Vein Therapy is right for you.

What types of veins can be treated?

The Cutera Laser can remove unsightly vascular lesions from all parts of the body. **Small, facial veins** (or “telangiectasia”) can be treated quickly without bruising or complication. **Spider veins** and large **blue leg veins** can also be treated with excellent results. Knotty varicose veins are not good candidates. Hemangiomas, Port Wine Stains and other Vascular Malformations are also treatable. A careful evaluation with your clinician will help you determine which vessels can be treated and the best course of treatment.

How does this compare to Sclerotherapy?

Your doctor or clinician will advise you on the best course of action, but many physicians and patients prefer Cutera Laser Vein Therapy because there are no painful injections.

What about blood blisters and port wine stains?

Blood blisters or “hemangiomas” respond very well to CoolGlide vein Therapy, usually with just one session. Patients with port wine stains and other vascular lesions who had given up on finding a solution have been overwhelmed by the success of their CoolGlide vascular treatments. Consult with your clinician for a thorough evaluation.

How many Treatments will I need?

Often, patients find that one or two treatments are sufficient. However, the number of treatments necessary depends on the amount, colour and size of the vessels being treated. Since individual results vary, ask your clinician about your specific condition.

Do the treatments hurt and what happens are possible side effects?

Most patients experience a slight stinging or burning sensation as the energy pulses are delivered through the handpiece.

Although most patients report few if any side effects, those most commonly noticed are mild redness & local swelling of the skin, which typically last for less than 24 hours. Some patients may experience bruising and, in very rare cases blistering may occur. Consult with your clinician for complete information of the benefits and risk of treatment.

When will I see results?

Fading or Clearance of the treated vessels may occur immediately after the treatment; however the majority of patients notice significant improvement within two to six weeks of treatment. Final results may not be apparent for several months depending on the area treated.

Before & After

Pricing

	PRICE from
Facial lesion (1 spot)	\$90
Facial area (≤15min)	\$150
Legs lesion	\$120
Legs area (≤15 min)	\$150-200
15 - 30 min	\$300-500
30 min- 1 hour	\$500-800
